

Drafting an emerging picture

Name: Mackenzie Kot

Community & UN SDG(s): Teenagers/Young Adults + SDG 15 Life on Land

Date: Oct 18

Instructions:

Using your researched information fill out the flowing comparing the current state of the art with what you think new (software) innovations could bring to the community

Covering the orientations

Compare the left-hand column of the document "Technology configuration inventory" table with the right-hand column of the document "Community characteristics & orientation" table. What do you notice about the match (or mismatch) between your dominant community orientations and the current configuration of tools?

How well does the technology inventory cover the orientations? What themes emerged from both the community orientations and the technology configuration from your colleagues' notes

The inventory works well with the orientations. Since this is a young group, they tend to be technologically advanced, and the platforms that are used line up with their needs.

☒ Are you almost there?

I don't really see any big gaps in the tech inventory

☐ Are there big gaps?

What is the range of skills? If their interests and/or skills are diverse, could it cause conflict or distraction?

Skills are a wide range just because the group is a large group of people. Within the subset of teenagers/young adults that enjoy casual video games or who are open to learning more about light pollution, I don't see much internal conflict.

Achieving integration

Look at all the pieces of your configuration

What level of integration and interoperability has been achieved?

I listed a lot of apps that have nothing to do with each other, but they all have a role to play in the casual gaming area and in promoting causes people believe in

Where are there big gaps

I don't see many big gaps

Balancing the polarities (Current state)

How is the configuration balanced with respect to each polarity?

[illegible]
